Description https://github.com/bitsquare/bitsquare/ Led by Manfred Karrer.		

History

#1 - 12.10.2016 18:11 - didi

Taking a look at <https://github.com/bitsquare/bitsquare/issues/599> (memory leak).

I could reproduce the leak in the GUI when playing around in the Market->Trades tab, observing mem usage with visualvm.

The leak seems to occur when.

Right now I'm stuck building the application from source. Building @libopenjfx-java@ (as described "here":

<http://askubuntu.com/questions/833193/how-do-i-install-openjfx-on-ubuntu-14-04-linux-mint-17>) fails.

Another leak is supposed to be in the *seed node app*. See instructions in @doc@ directory for how to run this. It implements a Tor hidden services as far as I understood (todo: learn about that).

#2 - 12.10.2016 18:29 - didi

- Tracker changed from Bug to Feature

#3 - 08.11.2016 01:59 - didi

What's very interesting about this project is the experiment how to establish a decentralized project team, supported by the integrated business model of collecting fees. See <https://forum.bitsquare.io/t/bitsquare-as-decentralized-autonomous-organization/38>

#4 - 22.12.2016 20:43 - didi

- Tracker changed from Feature to Research

- Project changed from Lab to lab10

- Subject changed from Research bitsquare to Research bitsquare - The decentralized bitcoin exchange

- Description updated

- Status changed from New to In Progress
