

## Play for Privacy - Feature #64

### P4P Ethereum Smart Contract

07.03.2017 10:29 - didi

<b>Status:</b> New	<b>Due date:</b>
<b>Priority:</b> Normal	
<b>Assignee:</b> didi	
<b>Target version:</b>	
<b>Description</b>	
The Ethereum smart contract should cover the following aspects:	
<ul style="list-style-type: none"><li>• Schedule (<i>admin</i> account can open and close bidding slots)</li><li>• Raffle: randomly select the next participant (may require not just one, but an ordered list in case we want to implement the possibility to fall back to the next in list if a player is not ready)</li><li>• Distributed Payout (the distribution key should probably be hardcoded on contract creation)</li></ul>	
To be decided:	
<ul style="list-style-type: none"><li>• Do we want update and kill/suicide mechanisms?</li><li>• Integration of btc-relay for Bitcoin payments?</li></ul>	

#### History
